Worry-Free WiFi no more dead spots

only
\$5/month

NVC MANAGED WIFI

As today's technology continues to advance, almost every device in your home needs a solid Internet connection: computers, smart phones, tablets, TVs, and products like doorbells, lights, and security systems. Many people confuse the Internet and WiFi for good reason. The words are often used interchangeably.

The Internet is connected networks all over the world. WiFi is your personal wireless network within your home. A wireless connection is made possible using WiFi technology; specifically, by another device in your home called a router.

An older router is one potential cause of WiFi issues. WiFi technology has improved a lot recently, so if your router is a few

years old, it won't work nearly as well as a new one.

If your router itself is not the problem, its location might be. For you to enjoy the best possible online experience, your router needs to be able to send out a strong signal to your wireless device. In general, the signal gets weaker the farther you are from it.

If possible, you should place the WiFi router on a table or a shelf. The ideal position is half-way between the floor and the ceiling.

The easiest way to get a strong WiFi signal throughout your home, and even in your yard, is by creating a bigger WiFi network.

If you are frustrated by the WiFi coverage in your home, there is an alternative available. Called a Mesh WiFi network, this technology

combines a WiFi router with one or more satellites, which are small wireless devices you place in different rooms.

These satellites communicate with the router and provide you with a strong WiFi signal everywhere in your home; even in your backyard.

We can help ensure your WiFi is up to speed and let you know if a Mesh WiFi router would increase your signal.

Call us today to find out more and to receive your first 2 months of Managed WiFi service FREE!
